Spider man shattered dimensions pc not opening

Spider man shattered dimensions not opening. How to play spider-man shattered dimensions on pc.

You can't fix the issue on your own. If you're still having trouble after trying various solutions, there might be a third solution out there. Here's what I tried: 1. Make sure both Game.exe and Launcher.exe are running in Compatibility mode with Vista Service Pack 1 and Administrator privileges. 2. Finish the level in windowed mode at the lowest settings, including resolution of around 640x480. 3. Go to System > Display > Graphics and apply high-performance settings. If you try these steps, hopefully, it will work for you too. Please confirm and update the PCGamingWiki page if possible. I'm having trouble launching Shattered Dimensions, even with all recommended settings. It just won't start, and I don't see any error messages in task manager. Sometimes my Steam icon turns green and back to blue without doing anything else happening. I suspect a resolution issue, but can't find an .ini file to adjust it in the game folders. Has anyone else experienced this problem?
